
Suyog KC

Full-stack Developer & Technical Lead

suyogkrazz@gmail.com | suyogkc.netlify.app | github.com/kcsuyog
linkedin.com/in/suyogkc

Full-stack developer and technical lead focused on useful software, clear user experiences, and reviewable delivery. Experience spans product engineering, remote agency work, co-founding a software consultancy, and using AI agents with explicit scope and verification.

Experience

ShiftCare / Current

Full-stack development & technical leadership

- Contribute across application features, APIs, and administrative user experiences.
- Review changes for correctness, query scope, maintainability, and evidence of expected behaviour.
- Structure larger work into reviewable changes and develop agent workflows with explicit ownership and verification.

PineSoft / Previous

Co-founder

- Co-founded a software consulting firm and helped grow its consulting work.
- Collaborated with teams to build products for consumer and business use.

Independent & agency work / Previous

Freelance developer

- Worked remotely with agencies and product teams on software delivery and user experiences.

Skills

Engineering: JavaScript, TypeScript, Ruby on Rails, Vue, React, Astro, API development

Delivery & leadership: Technical planning, code review, feature decomposition, behaviour testing, cross-functional collaboration

AI-assisted development: Orca worktrees, Claude Code, Codex, Hermes skills, agent orchestration, independent review

Selected projects

Suyog's journal

Personal publication built with Astro and Markdown, preserving existing article URLs and adding accessible motion, local search, RSS, and browser checks.

ShiftCare AI Skills

Contributed public documentation covering discoverability, access and permissions, and security reporting for AI-agent skills.
